

# Licence Upgrade

## NumberOK

Updated:	2017-09-25
Latest version always at:	<a href="https://goo.gl/YTmDmp">https://goo.gl/YTmDmp</a> *

Normally, NumberOK re-activation process looks as follows:

1. Uninstall NumberOK
2. Install NumberOK with a new licence key.

If you would like to preserve settings, please, employ the following workaround:

1. Quit **NumberOK** if it is up and running
2. Go to **C:\ProgramData\FF\NumberOk3\**
3. Open **NumberOk.ini**
4. Try locating **License.Auth** and **License.Key** (somewhere around row 53). These might be absent if NumberOK deactivated itself upon demo licence expiration.
5. If **License.Auth** is present then remove the entire row.
6. If **License.Key** is present then replace the key sequence (follows the pattern XXXXX-XXXXX-XXXXX-XXXX) with a key provided to you. Otherwise add a new row starting with **License.Key** and having the key appended to it.
6. Save and close **NumberOk.ini**
7. Launch NumberOK
8. Go to **Settings > General**
9. Check the **Key No.** matches the one you've been provided with
10. Check that **Valid until** indicates some date in the future
